Working Prototype Known Problems Report

Product: Camphyr
Team Name: Team Camphyr

Known Problems and Bugs:
- Sometimes, the submit button for different forms display "Submit Query" instead of "Submit
  - This occurs randomly and more often on Firefox than Google Chrome
  - We are not sure where the browser error occurs
  - We are not sure of how to fix this error, but it appears to just be an aesthetic problem
- When adding a snippet to a story, or writing a standalone story, user inputted "newlines" do not display
  - This occurs when the user tries to input "newlines" inside of a form
  - When submitted, the form does not display the "newlines"
  - There could be methods written to catch newline inputs and display them
- Passing HTML script to any form breaks the page
  - Ex: <div class="sample"></div> will break the page when inputted into a form
  - We are not sure why this occurs
  - There could be methods written to catch when script like text is written and check for symbols
- A story named "Stuff212121" when added to, leads to a different application but all other stories function properly
  - Failure occurs when user tries to add additional snippet to story
  - Unknown where the fault appears because all other user stories are fine
  - Not sure how to fix this error since we are not sure why only this story is having issues
- On the story search page, the searches return all snippets instead of just the story title once
  - Failure caused whenever user searched for a story with more than one snippet added
  - Fault appears in default.py in searches def.
  - We are unsure how to fix since the search treats each snippet as a different story since each snippet has a unique id. But all links lead to same story
  - It doesn't cause any issues, but it can be confusing for users because all the snippets are actually from the same story
